

Phishing Emails: Tips from a Staff Senator

These are by no means official instructions. They are tips that staff senators have gathered from ITS during the various phishing attempts and gathered from other staff members.

What to look out for

- Poor grammar
- Poorly formatted email (see below)
- Suspicious or unusual requests
 - Emails asking for personal information, passwords, etc.
- A link without the s in <https://>
 - The s means it's a secure site
- Example: lines of text are broken in strange places and punctuation on the wrong lines, etc.

Security alert

To

Action Items

This is to notify you that our system has detected several attempts to access your email account from an unrecognized device.

New login from Chrome on MAC

Thursday, August 31st, 2017 at 07:35 am.
162.173.05.11
Alabama, United States*

If you don't recognize this activity,

we strongly recommend you [Review](#) your account to save your current IP in our database. Otherwise, you can disregard this message

. Why are we sending this?

We didn't recognize the browser or device you used to log into your email account. This could be the result of accessing your account from a new or public computer or changing your browser settings, but it could also be a sign of unauthorized account activity.

Protect yourself from phishing emails

We will never ask for your password in an email. If you don't trust a link in an email, go directly to the normal login page [Here](#)

Things to check if you suspect phishing

- Double click on the sender's name: look at the email. *Sometimes* the email will not match the name, or the email will not be a Mason email.
 - Do NOT assume that emails are okay if they are from a gmu.edu address. Phishing attempts can use a gmu.edu address or use a compromised Mason account.
- Hover over the link they sent (but DO NOT click on it) to see if the URL is suspicious.
 - Although when you click on the link, the website may look like a Mason website, hovering over the link should show the true URL (see examples below).

Why are we sending this?

We didn't recognize the browser or device you used to log into your email account. This could be the result of accessing your account from a new or public computer or changing your browser settings, but it could also be a sign of unauthorized account activity.

Protect yourself from phishing emails

We will never ask for your password in an email. If you don't trust a link in an email, go directly to the normal login page [Here](#)

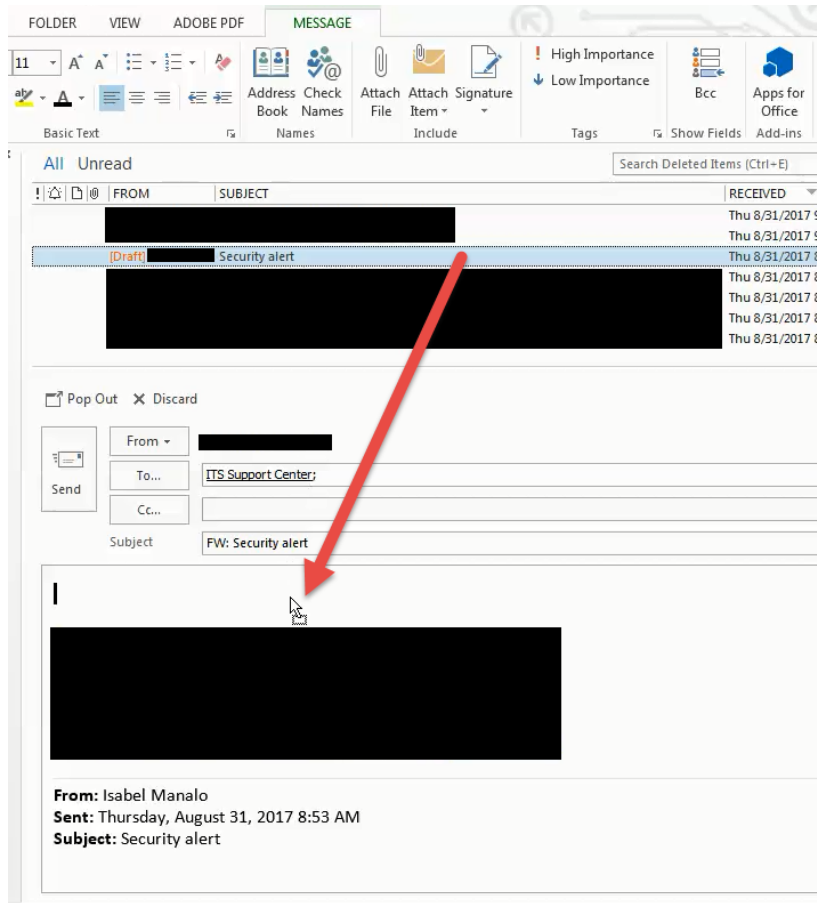

- Check the ITS Alerts page to see if this specific email has been reported:
<https://itservices.gmu.edu/alerts/index.cfm>.
 - Click on Security Alerts.
 - Look for alerts for the date the email arrived and click to Read More.

- This will show the specific email, so you can check if it's the one you got.
- Note: there may be multiple alerts for a single day, so be sure to check all alerts for the day you received the email.
- Example: ITS alert for the email from 8/31/2017 with subject "Security Alert" (above):

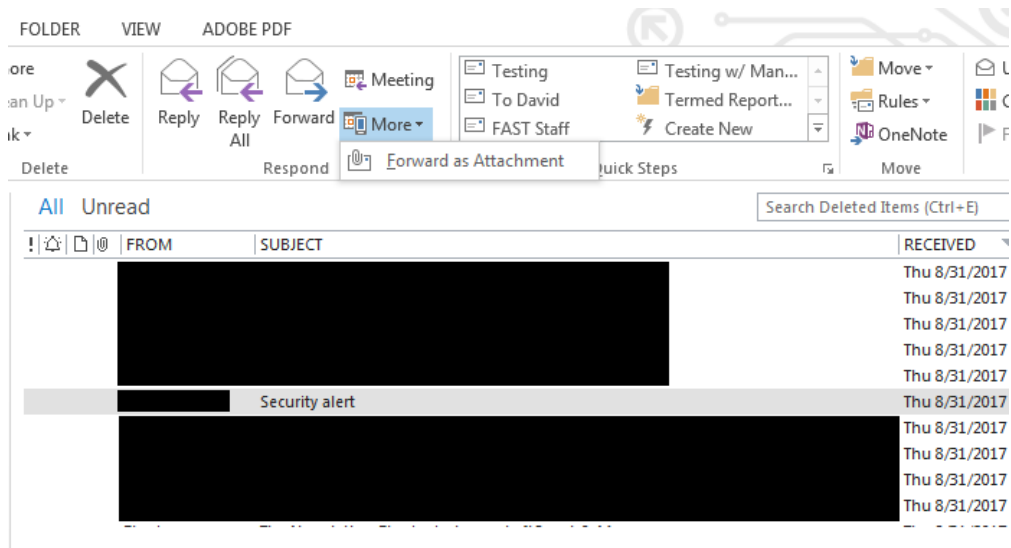

The screenshot shows a web browser window displaying an alert from the ITS Support Center. The alert is titled "8/31/17: Circulation of a New Phishing Email" and is dated August 31, 2017, at 9:16 AM. The alert text states: "A new phishing email is circulating the George Mason University community. This is a copy of the latest phishing email. If you get this message, DO NOT reply, DO NOT click any links, and DO NOT provide any personal information. Delete the bogus email. We never ask for this information via email. The Email Group is working on the list of who received the email and is closing the accounts of those who responded to it." Below this, it says "THE PHISHING EMAIL LOOKS LIKE THIS:" and provides details: "From: [REDACTED]", "Subject: Security alert", "Date: August 31, 2017 at 8:52:39 AM EDT". The alert continues: "This is to notify you that our system has detected several attempts to access your email account from an unrecognized device." It then lists details of a "New login from Chrome on MAC" on Thursday, August 31st, 2017 at 07:35 am, from IP 162.173.05.11 in Alabama, United States*. The alert advises: "If you don't recognize this activity, we strongly recommend you Review [link removed] your account to save your current IP in our database. Otherwise, you can disregard this message." It also includes a section "Why are we sending this?" and a warning: "We didn't recognize the browser or device you used to log into your email account. This could be the result of accessing your account from a new or public computer or changing your browser settings, but it could also be a sign of unauthorized account activity. Protect yourself from phishing emails. We will never ask for your password in an email. If you don't trust a link in an email, go directly to the normal login page Here [link removed]". The browser interface includes a navigation menu on the left with categories like "SERVICE CATEGORIES" and "INFO & RESOURCES", and a "QUICK LINKS" section on the right.

Forwarding phishing emails to the ITS Support Center

- If you forward the email to the ITS Support Center (support@gmu.edu), you should *attach* the email too.
 - Attaching the email gives the security office more information like where the email originated from, etc.
 - Attaching an email:
 - Click on the email you are forwarding and drag it down to the body/message of the email you are forwarding.

OR

If you clicked the link and entered credentials

- Change your password as soon as you realize it at <https://password.gmu.edu>.

- Contact the ITS Support Center at 703-993-8870 or support@gmu.edu to report that you were a responder to a phishing email.
 - Don't be embarrassed to report if you've responded! It could be your personal information that was compromised, as well as, university information.

Other Resources

- Watch the *Avoiding Phishing Scams* video on <https://www.lynda.com/>.
- Review some general information on phishing emails on the IT Security Office's website: <http://itsecurity.gmu.edu/Resources/Phishing.cfm>.
- Recent phishing attempts at Mason: <http://itservices.gmu.edu/alerts/>.

October: National Cyber Security Awareness Month

- See the schedule of events here: <http://itsecurity.gmu.edu/Resources/cybersecurity.cfm>.
- The IT Security Office is offering a giveaway for National Cyber Security Awareness month:
 - Go to <https://www.lynda.com/>, search for the *Avoiding Phishing Scams* video, and watch it.
 - Once you've watched, click on your profile in the top right corner and choose certificates from the drop down. Save your certificate as a PDF and email it to itsinfo@gmu.edu.
 - You will be entered in a drawing for a \$10-\$25 gift card.
